Summary

Experienced DevOps / Production Engineer with **7 years of proven expertise** in maintaining high availability systems and critical software development within distributed, ultra low latency environments. Skilled at designing and developing complex python **workflows**, **automations**, **monitoring** and **observability** solutions.

Experience

DevOps / Production Engineer Oct 2023 – Present
Susquehanna International Group *Dublin, Ireland*

- Responsible for production support of ultra low latency, high frequency trading environment.
  - Proactively monitored and resolved production issues accross **10 global regions** and **200+ bare metal hosts**.
  - Developed API endpoint monitoring and alerting solution for a critical time sync service on 35 hosts split between Chicago and Frankfurt.
  - Maintained stable and consistant production environment using **Ansible** for configuration management
- Saved **4 hours per week** for the team by migrating **250+ reconciliation workflows** to modern platform
  - Moved from basic job scheduler to defining workflow in code using Apache **Airflow** + **Python**
  - Added handling and remediation for failure scenarios which previously required manual intervention
  - Developed web dashboard in Python (Flask) enabling **observability** and rapid triaging.
- Planned and executed migration to .NET 8 within 1 week
  - Deployed and tested .NET 8 versions of **16 Trading Apps**.
  - Developed ansible playbook and installed required libraries + tools across **300+ Prod and Dev hosts**.
  - Collaborated with Traders to seamlessly switch over with zero downtime and zero production incidents
- Implemented Devops practices to software release pipeline.
  - Created **deployment pipelines** in Octopus Deploy resulting deployments of new releases within **5 mins**
  - Ensured easy rollback by maintaining **canary deployment** system with Prod and Pilot versions.

Site Reliability Engineer Sep 2021 – Oct 2023
ServiceNow *Dublin, Ireland*

- Carried out testing and QA of **70+ automations** for new data center rollout resolving bugs and blockers completing all requirements **3 weeks ahead of schedule**
- Took **initiative** to explore and evaluate an existing underused automation platform. **Created proof of concept** and collaborated with fellow engineers, leading to reduction in monitoring noise.
- Maintained databases and web servers which consisted of load-balancing, upgrades, performance, migrations, backups, restores and manual configuration changes following ITIL practices.
- Drove resolution of incidents and escalations related to customer ServiceNow Instances.

Senior Technical Support Engineer Oct 2018 – Sep 2021
VMware *Cork, Ireland*

- **Managed escalations** from Microsoft and Google engineers on their respective VMware cloud platforms.
- **Promoted twice within 3 years** to a senior position by vastly exceeding expectations set by management.
- Resolved technical issues with VMware products such as VCF, vSphere, vCenter.
- Engaged engineering teams to resolved bugs encountered and advocate for new features required by customers

Technical Skills

Languages: Python, Powershell, Bash
Tools: Git, Apache Airflow, Ansible, Octopus Deploy
General: Networking, Windows, Linux, Automations

Education

Trinity College Dublin Dublin, Ireland
BSc Electronic Engineering *Sep 2014 – May 2018*
